MegaClad

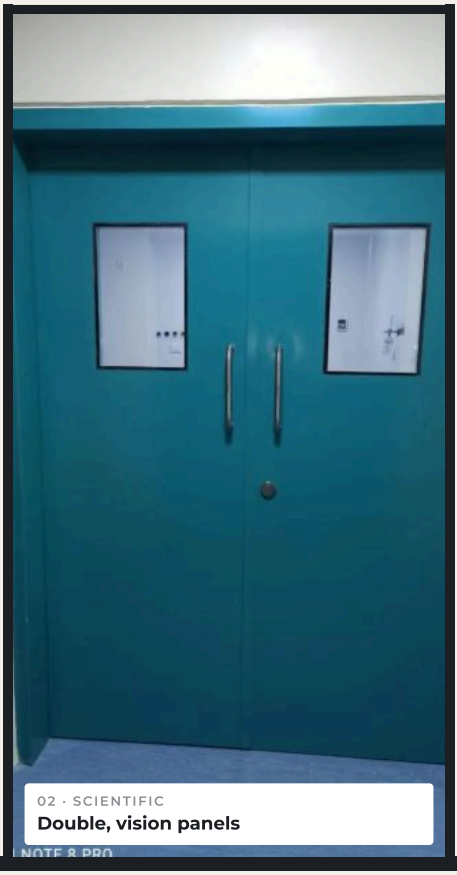

PRODUCT CATALOGUE · 2026

Doors

Doors made for panel buildings. Wood-grain doors for homes and offices, powder-coated steel doors for clinics, labs and plants, and the special doors a building needs: emergency exits, sliding, swing and fire-proof doors. Fitted square into the panel wall by our own crews.

01 · RESIDENTIAL
Wood-grain single

02 · SCIENTIFIC
Double, vision panels

03 · EMERGENCY
Panic-bar exit

6 types

Single, double, emergency, sliding, swing, fire-proof

14 woods

Wood-grain shades, plus plain colours

Any colour

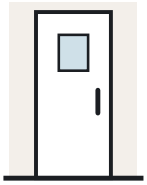

Powder-coated steel for clean rooms

Fitted

By our own crews, into the panel wall

Six kinds of door. Two kinds of room.

Every door here fits a MegaClad panel wall, partition or cold room. Single and double doors come in two families: residential for homes and offices, scientific for clinics, labs and plants.

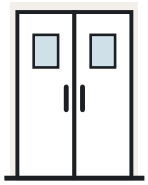

01

Single door

One leaf, for rooms, cabins and offices.

1a Residential · 1b Scientific

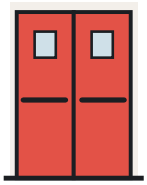

02

Double door

Two leaves for wide openings and halls.

2a Residential · 2b Scientific

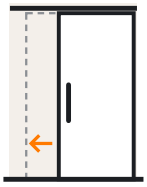

03

Emergency door

Panic bars, opens outward with one push.

Single · Double

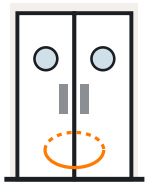

04

Sliding door

Slides on a top track. No swing space needed.

Stores · Cold rooms

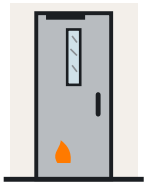

05

Swing door

Opens both ways with a push and comes back.

Kitchens · Hospitals

06

Fire-proof door

Holds back fire and smoke between areas.

On request

Residential

- Wood-grain laminate in 14 shades, or a plain colour
- Flush or moulded face
- Lever handle and lock
- Homes, rooftop rooms, offices, cabins

Scientific

- Powder-coated steel in any colour
- Flush with the panel wall, easy to clean
- Vision panels, closers, kick plates
- Pharma, labs, hospitals, food plants

Single doors, for every room.

The everyday door: one leaf in a steel or wood-grain frame, made to the size of your opening. Pick the residential or the scientific build.

Residential single

1a · Homes & offices

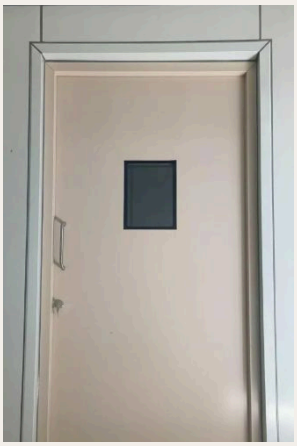

Finish	Wood-grain laminate (14 shades) or a plain colour
Face	Flush, or moulded panels
Frame	Wood-grain frame matched to the leaf
Hardware	Lever handle, lock and key; vision panel and closer if you want them
Where	Main doors, bedrooms, cabins, offices

Scientific single

1b · Clinics, labs, plants

Finish	Powder-coated steel, any colour
Leaf	Steel skins with an insulated core, flush with the panel wall
Vision panel	None, square, or a tall strip; single or double glazed
Hardware	Pull handle, lock, overhead closer, kick plate
Where	Pharma and lab rooms, wards, food plants, cold rooms

D·03 • DOUBLE DOORS •

Double doors, for wide openings.

Two leaves that open together or one at a time, for halls, main entrances, trolleys and machines. One leaf is the active leaf; the other stays bolted until you need the full width.

Residential double

2a · Main doors & halls

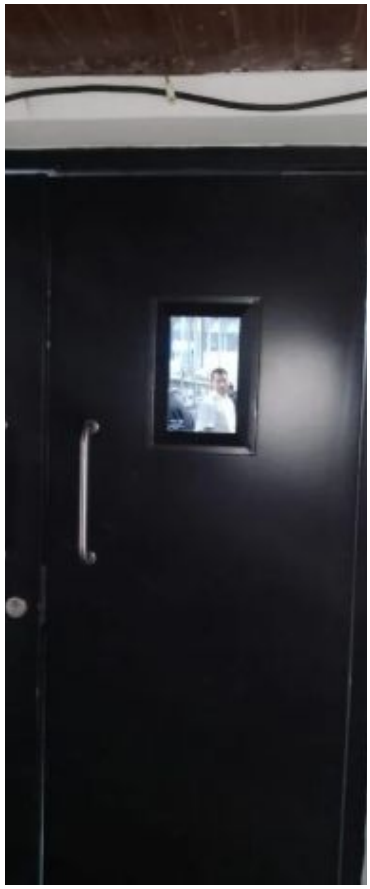

Leaves	Two equal leaves, or one wide and one narrow
Finish	Any of the 14 wood-grain shades or a plain colour
Hardware	Bar or lever handles, lock on the active leaf, bolts on the other
Where	Main doors, living rooms, office entrances

Scientific double

2b · Corridors & plant rooms

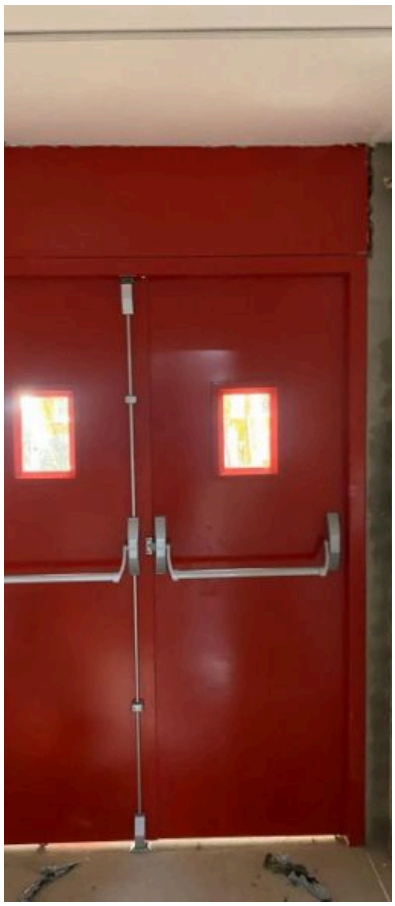

Leaves	Two equal leaves, or a leaf and a half; fixed side panels if needed
Finish	Powder-coated steel, any colour
Hardware	Pull handles, vision panel in each leaf, closers, kick plates
Where	Pharma corridors, OTs, warehouses, food plants

Doors for getting out safely.

An emergency door opens outward with one push on the bar, even in a crowd. A fire-proof door holds back fire and smoke between two parts of a building. Many buildings need both.

03 · EMERGENCY DOOR

Push the bar, the door opens.

Single or double, opening outward in the direction people leave, with a panic bar across each leaf.

- Panic bar on every leaf, no key needed from inside
- Opens outward, with a vision panel to see the other side
- Signal red or any colour, exit signage on request

06 · FIRE-PROOF DOOR

Holds back fire and smoke.

ON REQUEST

Steel fire doors with a fire-rated core, frame and glass, closing on their own.

- Tell us the rating your fire approval asks for
- We confirm the rating and its test papers with the quote
- Closer, seals and fire-rated vision glass

D·05 • SLIDING & SWING •

When a normal door gets in the way.

A sliding door needs no room to swing, so it suits wide openings and tight corridors. A swing door opens both ways with a push, so hands full of trays or trolleys never stop at a handle.

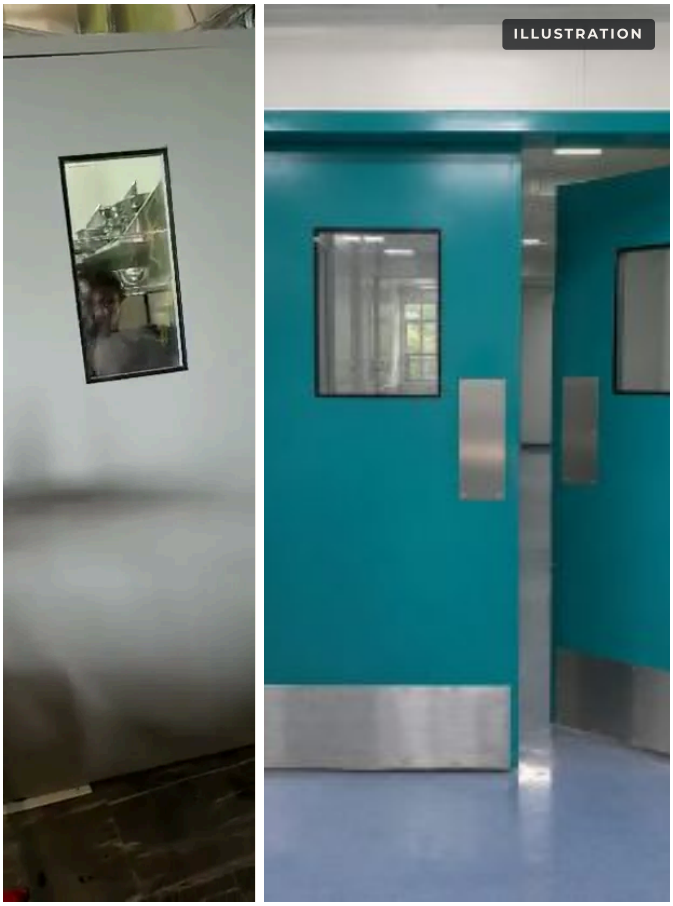

04 · SLIDING DOOR

Slides along the wall.

One or two leaves hung from a track above the opening.

- Stores, cold rooms, pharma rooms, wide openings
- Long pull handle, vision panel if you want one
- Powder-coated in any colour

05 · SWING DOOR

Push either way.

Double-acting hinges let the leaf swing in and out and come back to the middle on its own. The clip is one of ours, at a restaurant kitchen.

- Kitchens, hospital corridors, food plants
- Push plates and kick plates, vision panel at eye level
- Single or double leaf

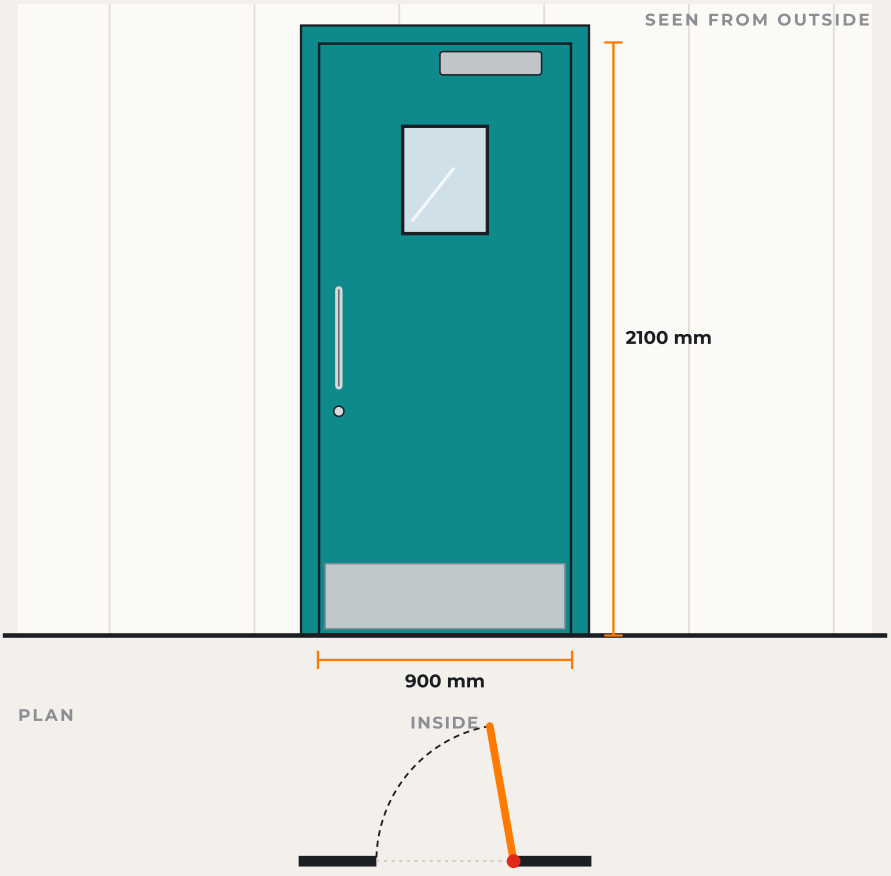

D·06 • DOOR BUILDER •

Draw your door. Send us the list.

Choose the type, finish, glass and fittings for each opening, add it to your door list, and send the list on WhatsApp. We reply with drawings and a quote.

TEAL · LH · OPENS IN

Scientific single door

On megaclad.com/catalog/doors you can pick each door's type, finish, glass, fittings and hand, then send the list to us on WhatsApp.

MARK	DOOR	SIZE	QTY
Your door list is empty. Set up a door above and add it.			

Sizes are your openings. We check every one on site before we make the doors.

Wood-grain or any colour.

Residential doors come in wood-grain laminate. Scientific doors are powder-coated steel, in a colour that matches your walls or marks a room's use.

Wood-grain shades

W01 W02 W03 W04 W05 W06 W07

W08 W09 W10 W11 W12 W13 W14 · stone

Photos of real samples. Shade numbers here are only for this catalogue: we bring the current shade card to your site.

Flush or moulded. Any shade on a flat face, or with pressed panels for a classic main door.

Powder-coat colours

Screen colours are close, not exact. Any colour can be matched: send a code or a sample.

The fittings, and which way it opens.

Every door is fitted out for how it will be used, and made left or right hand. Tell us the hand for each opening, or let us mark it on your drawing.

Door closer
Shuts the door gently every time.

Vision panel
Square or tall glass, single or double glazed.

Rounded glass
For wood-grain doors in offices.

Panic bar
Opens an exit with one push.

Lever & lock
For homes and offices.

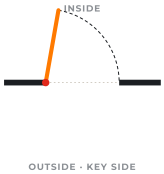

Pull handles
Steel D-handles for clean rooms.

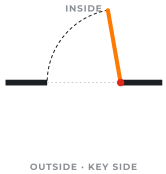

Left hand or right hand?

Stand on the outside of the opening, the side the key goes in. Note which side the hinges are on, and whether the door opens towards you or away. That gives the hand. For double doors, the hand is the hand of the active leaf.

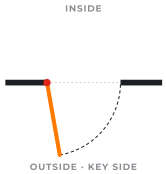

Emergency doors always open outward, the way people leave.

Wood-grain doors in a panel block

Emergency exit with panic bar

White double door

Flush wood-grain door

Teal double door at a corridor end

Green doors along a hospital corridor

Wood-grain door and frame

Blue double door

Made for the wall it goes in.

Doors are part of the panel job, not an extra. The opening, the frame and the door are planned together, so the frame sits square and seals against the panels.

01 **Mark the openings**
Doors go on the wall drawing with their size, type and hand, before the panels are made.

02 **Cut and framed**
Openings are cut in the panels, often at our plant in Medchal, and edged so the frame has a solid fixing.

03 **Frame and leaf**
The frame is fixed into the opening and sealed. The leaf is hung, checked for a level swing and an even gap.

04 **Fittings and handover**
Handles, locks, closers and panic bars go on. Film comes off, keys handed over.
