PRODUCT CATALOGUE · 2026

Windows

Light and air for panel buildings. uPVC windows and glass doors for homes, rooftop rooms and site offices, and view glass for offices, labs and plant rooms. Every frame made to its opening and sealed into the panel wall.

8 types

Sliding, casement, top-hung, ventilators, glass doors

7 colours

White, ivory, black, greys and two wood-grains

View glass

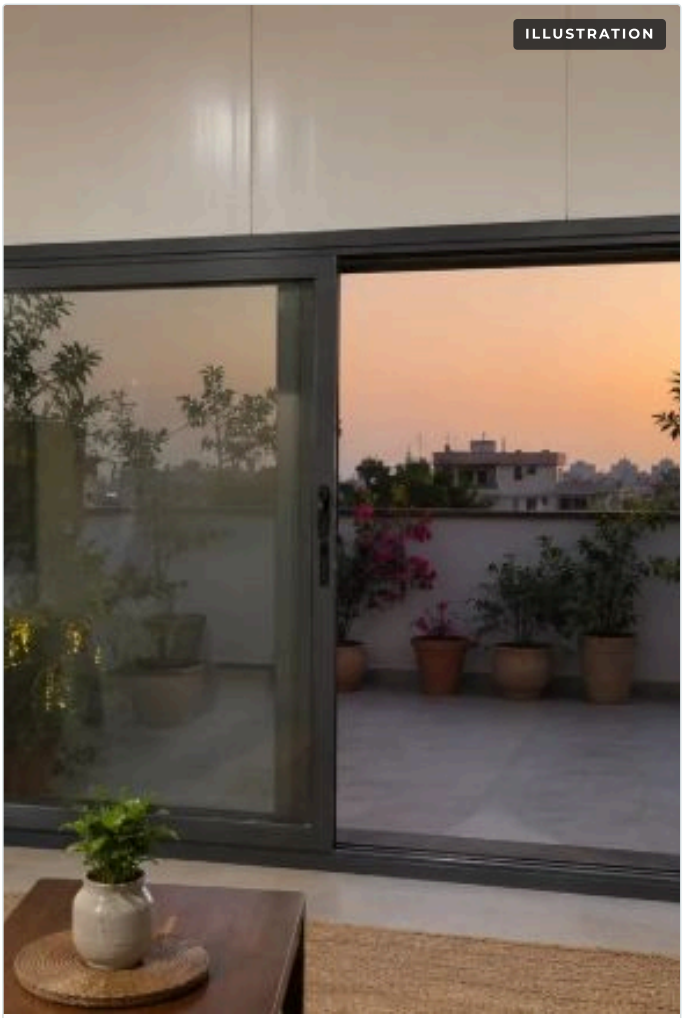

For panel walls, in any frame colour

Single or double

Glazing to suit heat, noise and use

A window that opens, or glass that stays.

Outside walls get uPVC windows and doors that open, lock and keep the rain out. Inside walls often need only glass to see through, set in a coloured frame that matches the doors.

A · uPVC WINDOWS & DOORS

For outside walls

Opening windows and glass doors in uPVC frames, with seals and locking handles. Homes, rooftop rooms, cabins and site offices.

TYPES	COLOURS
8, from sliders to folding doors	**7 frame finishes**
GLASS	MADE
Single or double glazed	**To each opening's size**

B · VIEW GLASS

For inside walls

Fixed glass set straight into the panel wall, so you can see across an office, a lab or a plant floor. The frame can match your doors.

OPENS	FRAME
No, fixed	**Any colour, or wood-tone**
GLASS	WHERE
Single or double glazed	**Offices, labs, cabins, plants**

Eight ways to open.

Each uPVC type opens a different way, for a different room. Tap a card to see it open.

01

Sliding window

Sashes glide sideways and save space. Living rooms, bedrooms, offices.

WINDOW

02

Casement window

Side-hinged sashes open fully for air and seal tight.

WINDOW

03

Top-hung window

Hinged at the top, opens out at the bottom. Air with privacy, even in rain.

WINDOW

04

Ventilator louvres

Glass blades let air through and keep privacy. Bathrooms and utility rooms.

VENTILATOR

05

Ventilator with exhaust fan

A frame ready for an exhaust fan. Kitchens and toilets.

VENTILATOR

06

Sliding door

Wide glass leaves that glide open onto a terrace or balcony.

DOOR

07

Casement door

A hinged glass door for a balcony or terrace.

DOOR

08

Folding door

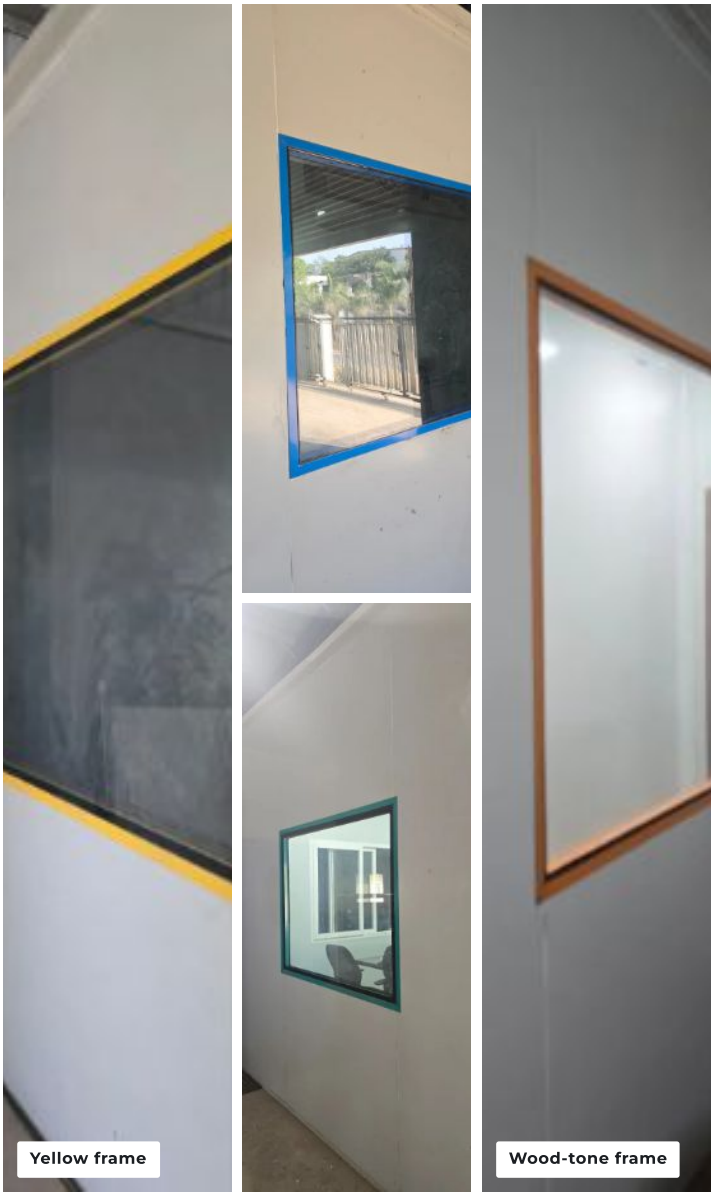

Leaves fold to one side to open the full width.

DOOR

Photos marked Illustration show the type, not a MegaClad site.

See across the room.

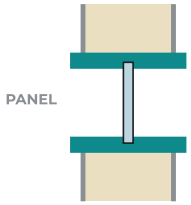

View glass turns a panel wall into a window. Supervisors see the floor from the office, nurses see the ward, visitors see the clean room without walking in.

Fixed glass, framed to the wall

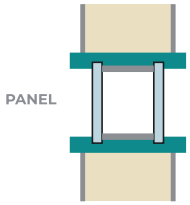

The opening is cut in the panel and the frame covers both faces of the wall, so the cut edge is never seen. Sizes are made to your drawing, from a small window in a door-side panel to glass the width of a room.

Teal · Blue · Yellow · Wood-tone · White · Grey

Single glazed

One pane, framed on both faces of the wall. For inside walls and cabins.

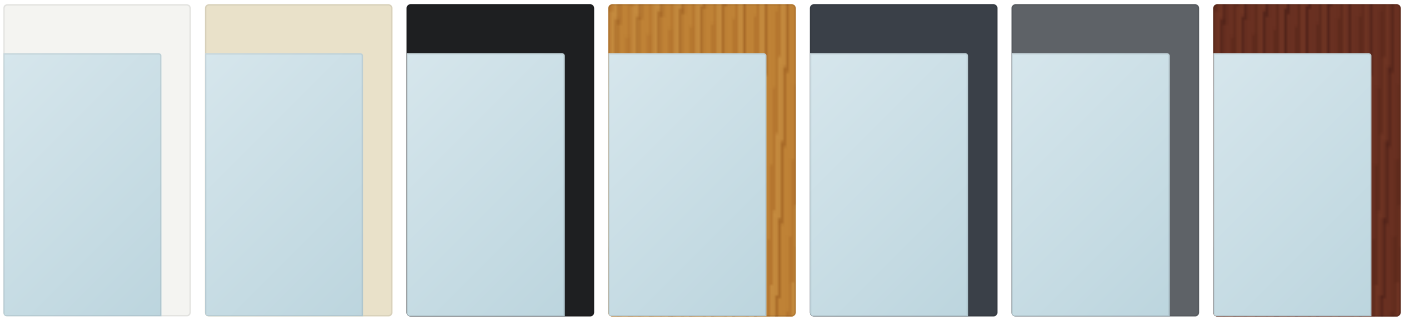

Double glazed

Two panes with a sealed gap, flush with both faces. Quieter, holds temperature better.

Seven frame finishes.

uPVC frames come in white and six coloured finishes, including two wood-grains. Pick one for the whole building, or one for outside and another for inside.

White
The standard frame

Ivory
Warm off-white

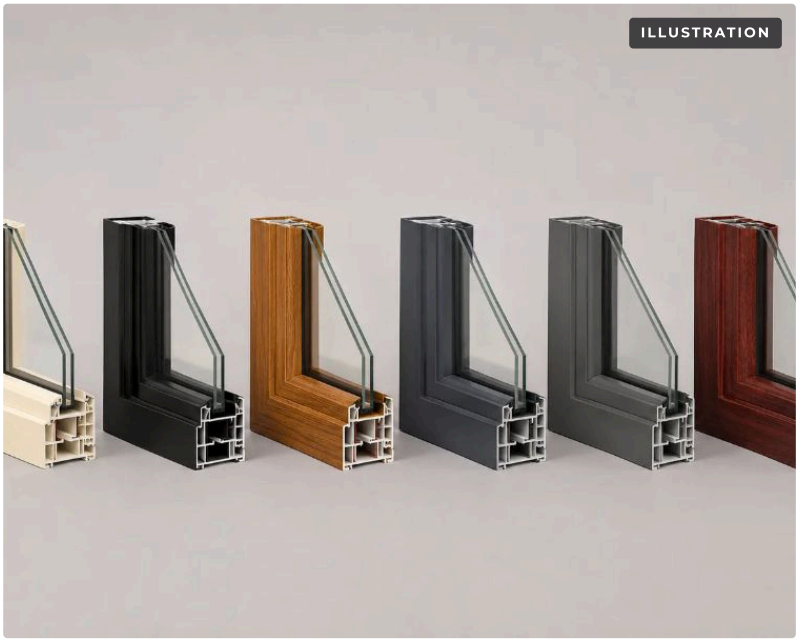

Black
Sharp, modern

Golden Oak
Light wood-grain

Anthracite Grey
Deep blue-grey

Dark Grey
Soft charcoal

Mahogany
Dark wood-grain

Outside, inside, or both

A coloured or wood-grain frame can be colour outside and white inside. Tell us which faces you want in colour.

Match the doors

Golden oak and mahogany sit well with our wood-grain doors.

WINDOW PLANNER

List your windows. Send the schedule.

Pick a type, size, colour and glass for each opening, add it to your schedule, and send it to us on WhatsApp. We reply with drawings and a quote.

ANTHRACITE GREY · SINGLE GLAZED

Sliding window

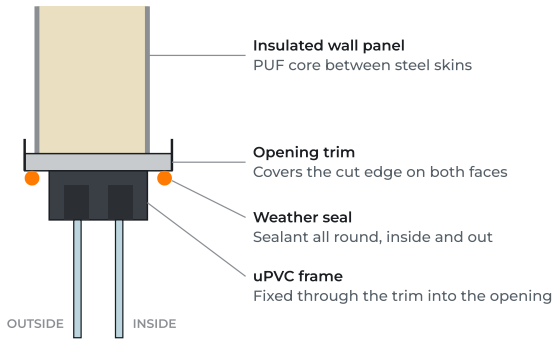

On megaclad.com/catalog/windows you can pick each window's type, size, colour and glass, see it open, and send your schedule to us on WhatsApp.

MARK	WINDOW	SIZE	QTY
Your schedule is empty. Set up a window above and add it.			

Sizes are your openings. We check each one on site.

Sealed into the wall, all round.

A window is only as good as the joint around it. We plan openings with the panels, so every frame has a clean, square opening and a weather seal on all four sides.

Section at the window head, drawn to explain, not to scale. Details change with the frame and wall thickness.

uPVC slider, our site

Trim on the inside face

01 **Mark the openings**
Windows go on the wall drawing with their type, size and sill height before the panels are made.

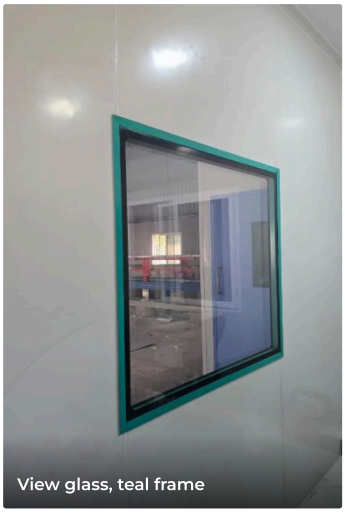

02 **Cut and trimmed**
Openings are cut square in the panels and edged with a trim, so the frame has a firm, clean fixing.

03 **Frame fixed and sealed**
The frame is set level, fixed through the trim and sealed on all four sides, inside and out.

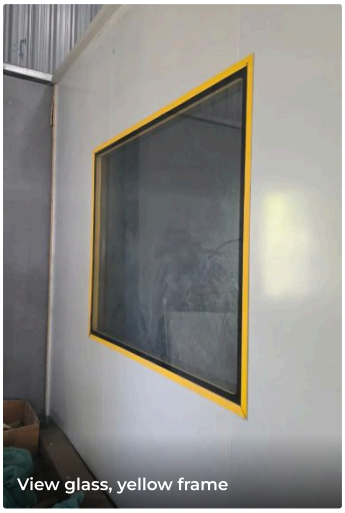

04 **Sashes and handover**
Sashes hung and adjusted, handles and locks checked, protective film off.
